

Motorized Shades and Drapes may seem like an extravagance, but after just a few days with them in your home, you will wonder how you ever lived without them.

Lighting Defines a Home

Some rooms benefit from their large, expansive windows, while other rooms may have smaller windows that don't let in much light at all.

In other words, every room has its own character with respect to how we want to allow light in. Motorized shades and drapes can help define that character into a thing of beauty.

Improve Privacy and Comfort

If you currently have drapes, you may find that you are always adjusting them as the sun moves across the sky, and dealing with them as it shines at different angles throughout the year. In addition, at night you most likely want all your drapes closed for privacy or you may want a few open a bit to make the house look "lived in" for security reasons. All this means lots of moving drapes around. With motorized shades and drapes, you can forget about running around pulling cords, twisting rods, and dealing with temperamental spring-loaded roller blinds. Modern motorized shades and blinds are quiet and efficient – controlled with a simple remote, a keypad, your smartphone, or voice control to raise them, lower them, or even shift them to a preset height and angle.

Reduce Heating and Cooling Expenses

By using the blinds to keep out the hot sun in the summer or help keep the heat in the house in the winter, you can reduce your heating and cooling expenses. And your blinds can be controlled by a home automation system to automatically adjust throughout the day and throughout the year.
